1. Research & Explore (2–3 Pages)

- Find and describe real-life uses of polygons and quadrilaterals in architecture, design, nature, and engineering.

- Include labeled diagrams and short explanations showing how their geometric properties (like angle sum, symmetry, or side length) are useful.

2. Geometrical Reasoning (4-6 Pages)

- Choose any two types of quadrilaterals.
- Prove a geometric property of each (e.g., angle sum formula, opposite sides equal).
- Show all work neatly with proper diagrams and reasoning.

3. Creative Design Challenge (1-2 Pages)

- Design a floor tile pattern, mosaic, or wall art using:
 - At least four different types of polygons
 - Including two different quadrilaterals
- Label all polygons in your artwork and explain your design choice.

4. Reflection (1 Page)

- In 5–6 lines, write how this activity helped you understand the importance of polygons in everyday life.

SCIENCE

Activity: To study the effect of manure and fertilizers on the growth of a plant.

Take moong or gram seeds and germinate them. Select three equal sized seedlings. Take three empty glasses or similar vessels. Mark them A, B and C. To glass A add a little amount of soil mixed with a little cow dung manure. In glass B put the same amount of soil mixed with a little urea. Take the same amount of soil in glass C without adding anything . Now pour the same amount of water in each glass and plant the seedlings in them. Keep them in a safe place and water them daily. After 7 to 10 days observe their growth .

Record your **observations** on the following guidelines-

- Did plants in all the glasses grow at the same pace?
- Which glass showed better growth of plants?
- In which glass was the growth fastest?

Here's a simple table format you can use to assess plant growth with the given parameters:

Date	Plant	Number of Leaves	Height (cm)	Leaf Size Increase (cm ²)	Flowering Started (Yes/No)
